

## Deaton Engineering Implements Quality Management System

Date of Publication: 08/01/2008

**Austin, Texas** – August 01, 2008 Deaton Engineering (DEI), a full service mechanical, electrical, and control system engineering firm, today announced the implementation of its Medical Device Product Development program which is based on the FDA's design control regulations set forth in 21 CFR 820.30.

The Product Development program establishes the foundation and tools that provide the necessary framework for quality by design – building in quality from the development phase through a product's life cycle. The Product Development program also promotes the improvement of internal work methods by continually evolving procedures and processes. In addition to our internal quality management system requirements, DEI conducts all work in accordance with the client's specifications. DEI is committed to meeting the objectives of its clients.

### About Quality Management System (QMS)

The key aspect of the Product Development program is the Quality Management System. The Quality Management System (Quality System) is a set of policies, processes, and procedures required for planning and execution (production/development/service) in the core business area of an organization. QMS integrates the various internal processes within an organization and intends to provide a project approach for project execution. QMS enables the organizations to identify, measure, control, and improve the various core business processes that will ultimately lead to improved business performance.
